
Playing PokerTH over Local Network

Posted by Mueller - 2007/11/21 04:27

Hi There,

we are sitting in different rooms and want to play over local network. Our local address range is 192.162.2.10 - 20. Starting with "netzwerkspiel beitreten" and entering one local address doesn't work. It results in timeout. Port 7234 is enabled. We are running an Belkin DSL WAN Router where a virtual server an the given port is enabled.

Is there a simple method to get connected locally?

Thanks for reply!
Peter

Problems like this are usually caused by personal firewalls (for example the built-in firewall of Windows). Make sure that the firewall permits the incoming port on the system running the server.
