
Skat

Posted by BadBoyAsAs - 2007/06/19 18:04

First PokerTH is a very good Game!!! Great work!!!

Can you program skat and bring out as a play??? This would be absolutely first-class!!!! Skat is a great game too. There must be it, nevertheless, as an Open Source play.

No immediate need for reinventing the wheel:

Xskat is too complicated under windows. I think you have to configure a lot of things. A software like PokerTH, install it and have fun, would be much better.

I agree XSkat is probably more suited for the Linux/Unix crowd. However, there is SkatOS - a Linux boot floppy (or CD) that just includes the minimum needed to play Skat. Guess you could also run this in a VM if you do not want to reboot your system for it.

Hi holger

Is there a possibility to play SkatOS over internet / network?

Re:Skat

Posted by holger - 2007/10/22 00:25

i think skatos supports networking. however, i am not sure, and i cannot check right now as i do not have a local copy and the page i mentioned is no longer available. xskat itself certainly does: <http://www.xskat.de/xskat-lan-irc.html>)

check for skatos here: <http://www.giannone.de/> link says it will be available again november 1st.

Damn that's the other version of the game. I thought it was the one that's the same as 31.
