
libboost trouble

Posted by trueg - 2008/04/13 06:43

I tried reinstalling pokerth today but it wouldn't launch. Neither apt-get install for the 0.5 version or the 0.6 version on source force would work. Everytime I tried to run it from the terminal I got a message:

error while loading shared libraries: libboost_thread-mt.so: cannot open shared object file: No such file or directory:unsure:

This was wierd since I had pokerth running in the past. Here is what I did to fix the problem:

I opened a terminal and navigated to /usr/lib. Then I created Symlinks with:

```
sudo ln -s libboost_thread*mt* libboost_thread-mt.so
```

```
sudo ln -s libboost_filesystem*mt* libboost_filesystem-mt.so
```

Hopefully this will be of use to other people.B)

I got the same problem with version 0.6.2. I tried your solution with a negative response :(

Please try the installer or zip linux package from this site. After installing click on the desktop icon or launch "./pokerth.sh" in install directory.
