
wrong permissions with 0.6.2-installer in Linux

Posted by pastis - 2008/05/22 01:27

hi,

i just installed the 0.6.2 version, but it does not run with a normal account, only with administrator.

The problem is that permissions of folders are 744 instead of 755
Here is a quick fix, using the Linux shell:

```
sudo find /opt/PokerTH-0.6.2/ -type d -print0 |sudo xargs -0 chmod -c 0755
```

Note: My system is Ubuntu 8.04

I have uploaded the linux-zip and linux-installer again with 755 directories. Can you please try if it works now?
