
PokerTH on Symbian?

Posted by mase - 2008/07/05 03:17

Hi!

Is there a way to port PokerTH to Symbian Smartphones?

I dont really know if the dependencies will work (Boost, SDL, GNUTLS). You can take the sources and replace the qt-part with the gui-widgets from symbian SDK. The table needs to redesign to fit the small screen.

As far as I know, real C++ exception handling is not supported on symbian. Also, threads/sockets and TLS are not portable. This means that basically you would have to rewrite a symbian version from the scratch.
