(as you see I have working properly network connection->I'm posting so it isn't problem with internet connection (i hope so))

so the question is: how to configure the settings to start internet game???

# netstat

Active Internet connections (w/o servers)

Proto	Recv-Q	Send-Q	Local Address	Foreign Address	State
tcp	0	1	xxx.mycomputer.xxx:34095	dracula.packetloss.biz:7234	SYN_SENT

next try:

tcp	0	1	xxx.mycomputer.xxx:57431	kubrick.freenode.net:ircd	SYN_SENT
-----	---	---	--------------------------	---------------------------	----------

and another try:

tcp	0	0	xxx.mycomputer.xxx:33157	willy.kundenserver42.d:http	TIME_WAIT
tcp	0	0	xxx.mycomputer.xxx:33160	willy.kundenserver42.d:http	TIME_WAIT

If it stays at this stage and does not connect, this means that there is probably some firewall preventing the access. Check that port 7234 (outgoing) is allowed for TCP.
