
Red cards appear as blue - endianness problem?

Posted by Sodki - 2007/11/26 10:36

Hello,

I'm using a big endian machine with a PPC CPU on a GNU/Linux OS and I get some weird colors on my client. Red cards show up as blue, the icon in the client's window also appears as blue and some avatars show up with weird colors. For example, if I use a red avatar, it shows up as blue; if I use a blue avatar, it shows up as red.

None the less, there are red things on my client's window. The cards in the "Hands" tab appear correctly in black and red and some user's avatars also appear correctly, sometimes. Sometimes they don't.

I believe this is an endianness issue. But I can't really track this down. I've compiled the client from SVN.

Thank you for your hard work.

<http://clientes.netvisao.pt/hmtr/pokerth/1.png>

In the first screenshot you can see the blue icon in the upper left corner, the blue nine of hearts card, the red "Hands" tab and the some reddish avatars.

<http://clientes.netvisao.pt/hmtr/pokerth/2.png>

In the second screenshot you can see that the cards on the table are all blue, except the card that is turning right now. When the card finishes the turning motion, it will turn blue, like the others.

Hello,

I have this problem too on Linux/PPC. It seems that the Red and Blue values are inverted in the images (RGB -> BGR). It concerns only the avatars and the cards. Sometimes, this bug disappears for a few minutes, then comes back, but this is rare.

Fred

Hi,

i have a powerbook G4 (linux ppc) and i have the same problem. Some colors are blue in the cards and/or avatars. Any idea?:blink:

(gratz for this good game btw:)

(i miss cash games (i dont mean real money;) and and the 'right to muck' xD)

It is a problem with Qt Framework which is the base of PokerTH GUI. So we hope this will be fixed in a future release.
